

Extend HDMI Over CAT5e up to 300-feet (with IR Return)

The CT60R breaks the limitation of the HDMI cables transmission length. With the small form factor CAT5e it is more flexible, and easier to run in tight spaces than HDMI cable. With the CT60R there is no need for set top boxes to be located near your HD Display. Auto equalization technology assures a crystal clear picture and with built in IR Transmitter/Receiver you have total control of the settop box.

Features

- Auto Equalizer
- Small form factor
- Extend 300-feet over Cat5e/6
- Rugged housing
